## **GMO'S**

### **Author**

The author for the infographic is George Morales. He is currently a freshman at The City College of New York and is looking to major in animals science.

### **Purpose**

The purpose of this infographic is to bring awareness to how GMOS are safe and pose no threats to people who decide to eat them. The reason for choosing this specific topic is over the fears growing of people trying to stay healthy and live longer. As we are currently in a pandemic many people are now starting to take care of themselves more better and watching what they use and put in there body. What this infographic can do is help relive people of these fears and convince them that GMOS are safe. GMOS have been around for centuries and there have been no problems associated with them that has been found to date. Most notably corn, this is the most genetically modified crop in the U.s and is found almost everywhere. With this information you have probably eaten many crops that have been genetically modified without even know, although now regulations are now requiring that food have an indicator that they have been genetically modified.

### **Audience**

The audience for the infographic is mainly to the general public. The infographic is kept short and simple with the main points being given to you that mostly any age group would be able to get the message the infographic is trying to portray.

### **Text**

This piece of text can be seen as an infographic. The content of the infographic provides facts that are known to be true on the background of GMOS and their history of being safe to date.

There is also a link to the FDA website where it talks more about how they ensure these foods are safe for consumption.

### **Setting**

The setting for the infographic can be almost anywhere. The infographic can be placed in schools or public areas where people are able to see, this is so more people are able to see and get the information. The main setting area however would most likely be NYC because this is where the author is writing from.

### **Conclusion**

This infographic should be made available to for all to see. This is so people can make their decision to either avoid GMOS completely or maybe have a change in the way they view GMOS.

# GMOS?

## Are they good for us ?

The term GMO stands for Genetically modified Organism.

But are they good for us? The answer is yes

GMOS have been present dating back as far as 10,000 years ago.

In present time, GMOS are currently present in most of our crops and pharmaceuticals.

Cost Effective

Not Only is The U.S. Using GMO Products

Heavily Regulated

No GMO Product has Been Linked to any Dangers

Multiple studies have shown them to be safe
